Progress Report Number 1

Student and Project Information

Student Name:

Derrick Jojan

Student ID:

300412573

Project Name: W26_3375_S1_G4_StoryEcho

1. Work Logs

Table 1. Team project work logs and Figma tutorial logs

Date	Hours	Description of Work Done
March 12th, 2026	1	Product Backlog Based on Team Discussion and Task Assignment
March 18th, 2026	2	Worked on Flow 1: Home / Dashboard layout and structure
March 20th, 2026	2	Designed Flow 3: Character Page / Character Details
March 21th, 2026	1.5	Developed Flow 4: Reflection History / Emotional Log
March 22th, 2026	1.5	Created Flow 7: Notifications / Alerts and refined interface elements

2. Work Description

- **Work Completed This Period**

  During this period, I worked on the planning and early design of the StoryEcho app. I went through the requirements with my team and helped decide how the app should be structured. I also looked at similar apps to get an idea of how features are usually organized.

  The app was divided into multiple flows, and I was responsible for Flow 1 (Home/Dashboard), Flow 3 (Character Page), Flow 4 (Reflection History), and Flow 7 (Notifications). I focused on building these parts in Figma and making sure they were simple and easy to understand.

- **Research and Planning**

  During this phase, I explored layout ideas and interface structures for my assigned flows. I used Figma to look at sample templates and test different layout options.

  For the Home/Dashboard, I focused on organizing content using a card-style layout and making key actions easy to access. For the Character Page, I planned how to show relationships and character progression clearly. For the Reflection History page, I focused on filtering and organizing entries. For Notifications, I kept the design simple so alerts would not interrupt the user too much.

- **Design and Development Activities**

  After the planning phase, I created low-fidelity wireframes for each of my assigned flows. The Home/Dashboard uses a card layout with quick action buttons. The Character Page includes sections for relationships and emotional tracking. The Reflection History page displays entries in a list with filters and tags. The Notifications flow includes small alerts and badge indicators.

  These wireframes helped visualize how users would move through the app and made it easier to discuss improvements with the team.

- **Challenges Encountered**

  One challenge was organizing a large amount of information, especially on the Character Page, without making the layout confusing. Another issue was keeping the design consistent with other team members' work since each flow was designed separately.

- **Solutions and Decisions Made**

  To solve this, I simplified the layout and focused on the main features instead of adding too much detail. I also followed consistent design patterns such as card layouts and similar spacing to keep everything aligned across flows.

- **Collaboration and Team Contributions**

  I worked with my team during discussions to make sure all flows followed a similar structure. I shared ideas for layout and interaction and adjusted my designs based on feedback. I also reviewed other team members' work to make sure everything connects properly.

- **Skills and Knowledge Gained**

  I improved my skills in using Figma and organizing layouts. I also gained a better understanding of how to design interfaces based on user needs rather than just visual appearance.

- **Next Steps / Future Plans**

  At the current stage, the prototype is in a draft version. In the next phase, we will focus on adding the user flow, which may require minor adjustments to the layout and refine the wireframes based on feedback and start working on more detailed designs.

3. AI Use Section

3.1 AI Tools and Specific Use

Table 2: AI Use

AI Tool Name	Version / Account Type	Specific Feature Used
ChatGPT	ChatGPT 3.5	wording support, reflection prompt drafting
Figma AI	Free version	Color suggestions icon suggestions
Grammarly	Free version	Correcting grammatical errors.

3.2 Value Addition

While AI tools supported wording and ideation, significant human design decisions shaped the final tutorial:

-

3.3 Appendix — Prompt History

Include all prompts used with AI tools.
Prompt 1: Help me write a short and simple reflection for a movie that fits a mobile app UI.

Prompt 2: Give me example tags (1–2 words) for movies like Iron Man 2 and Kung Fu Panda that match emotional or theme-based categories.

4. Actual Work Completed

Record all work completed toward the design and development of assigned flows.

Table 3: Actual work

Actual Work Completed	Work Detail
Design Frame screenshot : 	The Home/Dashboard page shows recently watched content, reflections, and quick actions. It uses a card-style layout to keep information organized and easy to access.

Actual Work Completed	Work Detail
Design Frame screenshot : 	The Character Page focuses on showing relationships between characters and their development. It includes a simple structure for connections and emotional tracking.

Actual Work Completed	Work Detail
	The Reflection History page allows users to view and filter past reflections. Entries are shown in a list with color-coded emotion tags.

Actual Work Completed	Work Detail
	The Notifications/Alerts feature includes reminders and updates using simple notifications and badge indicators without being too distracting.

.

5. Appendix

The following format presents the product backlog based on team discussions and task allocation among group members.

Table 4: Team Product Backlog and Task Allocation

Person	Task	Key Requirements
Sin-Yi	Logo design	App logo
Derrick	Flow 1: Home / Dashboard	Card-style content list Quick action buttons: Add Reflection / View Character

Person	Task	Key Requirements
		Relationships / View Story Overview
Jude	Flow 2: Series / Movie Page	Tabs or accordion sections: Overview / Characters / Reflection / Community Mood selector / emotional tags Lightweight text input + save button Scrollable community reflection list
Derrick	Flow 3: Character Page / Character Details	Node graph/network diagram for relationships Timeline of character emotional development Simple buttons to add or edit emotional tags
Derrick	Flow 4: Reflection History / Emotional Log	Card or list-style reflection entries Filter dropdowns Color-coded emotion tags
Sin-Yi	Flow 5: Search & Filter	Search bar with autocomplete Filter checkboxes/buttons Results displayed in card layout
Jude	Flow 6: Community Insights / Emotional Analytics	Pie chart/bar, chart/line chart for emotions Clickable summary of anonymous reflections
Derrick	Flow 7: Notifications / Alerts	Floating corner notification Badge indicator for updates
Jude	Flow 8: Settings / Preferences	Toggle switches, dropdown menus Save / Reset buttons
Sin-Yi	Survey Design	Design structured survey questions
Sin-Yi	Data Collection	data collected, quantitative & qualitative analysis
