Progress Report Number 1

Student and Project Information

Student Name:

Jude Enuanwa

Student ID:

300403859

Project Name: W26_3375_S1_G4_StoryEcho

1. Work Logs

Table 1. Team project work logs and Figma tutorial logs

Date	Hours	Description of Work Done
March 12th, 2026	1	Product Backlog Based on Team Discussion and Task Assignment
March 18th 2026	2	Started working on the Series/Movie page. Added background images, tags, and buttons. Added movie descriptions as well as episode tags.
March 20th 2026	1	Worked on the settings/ preferences page. Added icons and text
March 21st 2026	1.5	Brainstormed ideas for the Community Insights page.
March 21st 2026	3	Worked on creating graphs and charts for the community insight page, as well as reflections

2. Work Description

- **Work Completed This Period**

  During this reporting period, I focused on the initial planning and research phase of the project. I reviewed the project requirements and clarified the core functionality of the application with my team members. To gain a better understanding of common features and user expectations, I explored similar applications and documented potential features that could enhance the user experience. In our project, the team divided the wireframe into eight flows, including the Home/Dashboard, Series/Movie Page, Character Page/Character Details, Reflection History/Emotional Log, Search & Filter, Community Insights/Emotional Analytics, Notifications/Alerts, and Settings/Preferences. During team meetings, we first completed a draft version of the prototype to establish the overall structure and workflow. My responsibilities specifically included the Series/Movie Page, Community Insights/Emotional Analytics, and Settings/Preferences flows, where I contributed to designing the layout and prototype in Figma, identifying key interactive elements.

- **Research and Planning**

  During the research and planning phase, our team conducted comprehensive topic research, requirement analysis, and idea exploration to establish the core functionality of StoryEcho. I utilized Figma to investigate sample templates and evaluate potential interface designs, with the goal of identifying a layout that is intuitive, user-friendly, and scalable for subsequent development stages. Through

collaborative team discussions, I delineated the essential interface elements for key flows:

For the Series / Movie Page, this included tabbed or accordion-style sections for Overview, Characters, Reflection, and Community, alongside a mood selector with emotional tags, lightweight text input with save functionality, and a scrollable community reflection feed.

For Community Insights / Emotional Analytics, necessary elements encompassed visualizations such as pie charts, bar charts, and line charts representing aggregated emotions, as well as clickable summaries of anonymous reflections.

For Settings / Preferences, the interface incorporated toggle switches, dropdown menus, and save/reset controls to facilitate customization.

Given that the prototype remains in a draft stage, the team prioritized embedding the most critical elements within each flow based on initial discussions. Once all flows are fully interconnected, further refinements and adjustments will be undertaken to enhance usability and coherence across the application.

- **Design and Development Activities**

  After completing the initial research phase, I began developing low-fidelity wireframes to visualize the overall structure and functionality of the StoryEcho application. I focused on designing key screens, including Flow 2: Series / Movie Page, Flow 6: Community Insights / Emotional Analytics, and Flow 8: Settings / Preferences. These wireframes incorporated essential interface elements, such as tabs and accordion sections for navigation, interactive visualizations for emotional analytics, and customizable settings options. The drafts provided a tangible representation of the app's workflow, allowing the team to evaluate usability, discuss potential improvements, and refine the design before moving on to higher-fidelity prototypes. This iterative process helped ensure that the design decisions were grounded in user needs and aligned with the project's functional requirements.

- **Challenges Encountered**

  During the design of the community insights page, creating the graphs and charts proved to be really difficult, as whatever I tried didn't seem to work. I followed tutorials and tried debugging, but to no avail.

- **Solutions and Decisions Made**

  I tried something weird and different. I delved into Figma dev instead. I at first thought it was a tool to turn code into design, but figured it was the other way around. So I wondered, I hadn't used Figma's AI solution before. I knew what I wanted to do, but I didn't know if I could do it. So I wrote my React code and asked Figma if it could convert that into a design.

- **Collaboration and Team Contributions**

In the next phase, I plan to refine the wireframes based on team feedback and begin developing prototypes. I will also continue working on the pages assigned to me based on the task allocation discussed during our team meetings.

- **Next Steps / Future Plans**

  At the current stage, the prototype is in a draft version. In the next phase, we will focus on adding the user flow, which may require minor adjustments to the layout. These refinements will help improve the overall structure and ensure better usability before moving toward the final version.

3. AI Use Section

3.1 AI Tools and Specific Use

Table 2: AI Use

AI Tool Name	Version / Account Type	Specific Feature Used
ChatGPT	ChatGPT 3.5	wording support, reflection prompt drafting
Grammarly	Free version	Correcting grammatical errors.
Figma AI	Free	Converting React code into design elements

3.2 Value Addition

While AI tools supported wording and ideation, significant human design decisions shaped the final tutorial:

- Deciding to reverse engineer the design process

3.3 Appendix — Prompt History

Include all prompts used with AI tools.

Prompt 1:

```
// ReflectionCard.jsx
import React, { useState } from 'react';

const ReflectionCard = ({ emotion, insight, fullText }) => {
  const [isExpanded, setIsExpanded] = useState(false);

  // Configuration for emotional themes
  const themes = {
    Joy: { bg: 'bg-green-100', text: 'text-green-700', border: 'hover:border-green-400' },
    Frustration: { bg: 'bg-red-100', text: 'text-red-700', border: 'hover:border-red-400' },
```

```
    Calm: { bg: 'bg-blue-100', text: 'text-blue-700', border: 'hover:border-blue-400' }
  };

  const currentTheme = themes[emotion] || themes.Joy;

  return (
    <>
      {/* Summary Snippet (Clickable) */}
      <div
        onClick={() => setIsExpanded(true)}
        className={`flex flex-col gap-3 p-4 border border-gray-200 rounded-xl cursor-pointer
transition-all bg-white shadow-sm ${currentTheme.border}`}
      >
        <div className="flex justify-between items-center">
          <span className={`px-3 py-1 rounded-full text-[10px] font-bold uppercase
tracking-wider ${currentTheme.bg} ${currentTheme.text}`}>
            {emotion}
          </span>
          <span className="text-gray-400 text-xs italic">Click to read more</span>
        </div>
        <p className="text-gray-800 font-medium text-sm leading-snug">
          {insight}
        </p>
      </div>

      {/* Overlay / Modal (Conditional Rendering) */}
      {isExpanded && (
        <div className="fixed inset-0 z-50 flex items-center justify-center bg-black/50
backdrop-blur-sm p-4">
          <div className="bg-white rounded-2xl p-6 max-w-md w-full shadow-2xl relative
animate-in fade-in zoom-in duration-200">
            <button
              onClick={() => setIsExpanded(false)}
              className="absolute top-4 right-4 text-gray-400 hover:text-black text-xl"
            >
              ×
            </button>
            <div className="mb-4">
              <span className={`px-3 py-1 rounded-full text-[10px] font-bold uppercase
${currentTheme.bg} ${currentTheme.text}`}>
                {emotion} Reflection
              </span>
            </div>
            <p className="text-gray-600 leading-relaxed italic">
              "{fullText}"
            </p>
          </div>
        </div>
```

```
      )}
    </>
  );
};

export default ReflectionCard;
```

I need this as a Figma element for an iPhone 17. Can you make this fit that spec? Add a 10px margin on each end and populate with the following template data

```
// Dashboard.jsx
const reflections = [
  { emotion: "Joy", insight: "Great response to the new update.", fullText: "I really loved how intuitive the new dashboard is. The colors are much easier on the eyes!" },
  { emotion: "Frustration", insight: "Users found the login flow clunky.", fullText: "It took me three tries to find the login button on mobile. The font size is too small." }
];

export default function InsightsList() {
  return (
    <div className="grid grid-cols-1 md:grid-cols-2 gap-4 p-6 bg-gray-50 min-h-screen">
      {reflections.map((ref, index) => (
        <ReflectionCard key={index} {...ref} />
      ))}
    </div>
  );
}
```

4. Actual Work Completed

Record all work completed toward follow, table 3: actual work.

Table 3: Actual work

Actual Work Completed	Work Detail
Design Frame screenshot : 	Used curved rectangles for the base of every design element on this page. Buttons are going for a more purple scheme to complement the grey. I added tags for the episode that give ideas about how viewers feel.

Actual Work Completed	Work Detail
Design Frame screenshot :  	Community insights contain graphs and charts showing average user data submitted. The line chart shows the aggregation of different emotions over time.

Actual Work Completed	Work Detail
Design Frame screenshot :  	The settings page was honestly implemented with YouTube as a guideline. I tried to make it as minimal and as easy to look at as possible.

.

5. Appendix

The following format presents the product backlog based on team discussions and task allocation among group members.

Table 4: Team Product Backlog and Task Allocation

Person	Task	Key Requirements
Sin-Yi	Logo design	App logo
Derrick	Flow 1: Home / Dashboard	Card-style content list Quick action buttons: Add Reflection / View Character Relationships / View Story Overview
Jude	Flow 2: Series / Movie Page	Tabs or accordion sections: Overview / Characters / Reflection / Community Mood selector / emotional tags Lightweight text input + save button Scrollable community reflection list
Derrick	Flow 3: Character Page / Character Details	Node graph/network diagram for relationships Timeline of character emotional development Simple buttons to add or edit emotional tags
Derrick	Flow 4: Reflection History / Emotional Log	Card or list-style reflection entries Filter dropdowns Color-coded emotion tags
Sin-Yi	Flow 5: Search & Filter	Search bar with autocomplete Filter checkboxes/buttons Results displayed in card layout
Jude	Flow 6: Community Insights / Emotional Analytics	Pie chart/bar, chart/line chart for emotions Clickable summary of anonymous reflections
Derrick	Flow 7: Notifications / Alerts	Floating corner notification Badge indicator for updates
Jude	Flow 8: Settings / Preferences	Toggle switches, dropdown menus Save / Reset buttons
Sin-Yi	Survey Design	Design structured survey questions
Sin-Yi	Data Collection	data collected, quantitative & qualitative analysis
