1. Work Logs

Table 1. Team project work logs and Figma tutorial logs

Date	Hours	Description of Work Done
March 12th, 2026	1	Product Backlog Based on Team Discussion and Task Assignment
March 14th, 2026	1	Logo design
March 19the, 2026	2	Flow 5: Search & Filter
March 21th, 2026	4.5	Survey Design
March 22th, 2026	2	Data collection plan

2. Work Description

- **Work Completed This Period**
  During this reporting period, I focused on the initial planning and research phase of the project. I reviewed the project requirements and clarified the core functionality of the application with my team members. I also explored similar applications to understand common features and user expectations. Based on this research, I documented several potential features and contributed ideas during team discussions.

  In addition, during the project, we divided the wireframe into eight distinct flows:
  - Home / Dashboard
  - Series / Movie Page
  - Character Page / Character Details
  - Reflection History / Emotional Log
  - Search & Filter
  - Community Insights / Emotional Analytics
  - Notifications / Alerts
  - Settings / Preferences

  During team meetings, we first completed a draft version of the prototype. My responsibilities included Search & Filter, Survey Design, and Data Collection Planning, ensuring that these elements were clearly structured and aligned with user needs.

- **Research and Planning**
  During the research and planning phase, our team conducted topic research, requirement analysis, and idea exploration to define the core functionality of StoryEcho. I used Figma to explore sample templates and evaluate possible interface designs, aiming to identify a layout that is simple, user-friendly, and scalable for future development. Through team discussions, I identified the necessary interface elements, including a search bar with autocomplete, filter checkboxes/buttons, and results displayed in a card layout. AI tools were also utilized to support brainstorming and assist in designing the prototype's interface, layout, and color scheme.

  For the StoryEcho Prototype Evaluation Survey, I incorporated seven tasks based on the app's most frequently used features to provide users with a clear understanding of its functionality. Participants completed the tasks sequentially to assess the overall experience, with open-ended questions focusing on pages where users were likely to spend more time, such as the Home/Dashboard, Series Page, and Character Page. As the prototype is currently a draft version, the team embedded the most critical elements in each flow based on initial discussions. Once all flows are fully integrated, further adjustments and refinements will be implemented.

- **Design and Development Activities**
  After finishing the initial research, I started creating low-fidelity wireframes to show the structure of the application. I designed basic screens, including Flow 5: Search & Filter, and the StoryEcho Prototype Evaluation Survey. These draft designs helped the team understand how users might interact with the app and gave us the chance to discuss improvements early in the design process.

- **Challenges Encountered**
  One challenge I encountered was determining the appropriate level of complexity for the initial design. Some design ideas were visually appealing but difficult to implement within the project timeline. Additionally, aligning different team opinions regarding feature priorities required multiple discussions. Since team members worked on their prototype sections at different times, there was concern that linking flows too early might affect each other's designs. Therefore, during this stage, I focused primarily on developing the functionality of the interfaces assigned to me. When designing the evaluation survey, it was also necessary to wait until most team members had completed their draft prototypes to create relevant tasks and questions based on the app's current layout.

- **Solutions and Decisions Made**
  To address these challenges, I simplified the interface design and prioritized core features instead of optional enhancements. I proposed focusing on essential user functions first, which the team agreed would reduce development risk and improve project manageability. As a result, the current working version is a draft and does not yet incorporate all flows. Before collecting user survey responses, I plan to integrate the flows into a cohesive prototype and propose minor adjustments to interface elements with team members. This process will allow us to reassess the alignment between the survey, the prototype, and the overall project objectives.

- **Collaboration and Team Contributions**
  In the next phase, I plan to refine the wireframes based on team feedback and begin developing prototypes. I will also integrate and refine the overall user flow based on the prototypes completed by team members, and prepare a draft prototype for user testing through a survey.

- **Next Steps / Future Plans**
  In the next phase, I plan to refine the wireframes based on team feedback and begin developing prototypes. I will also continue researching implementation approaches to support both design and survey development. The survey will be shared with potential users to gather feedback, and the prototype will be adjusted accordingly. The Data Collection Plan involves distributing a Google Form survey to approximately 5–7 target users. After collecting and analyzing the responses, the results will be used to further refine the prototype and identify areas that require improvement.

3. AI Use Section

3.1 AI Tools and Specific Use

Table 2: Actual work

AI Tool Name	Version / Account Type	Specific Feature Used
ChatGPT	ChatGPT 3.5	Wording support, reflection prompt drafting, and prototype brainstorming
Figma AI	Free version	Color suggestions icon suggestions
Grammarly	Free version	Correcting grammatical errors.

3.2 Value Addition

While AI tools supported wording and ideation, significant human design decisions shaped the final tutorial:

-

3.3 Appendix — Prompt History

Include all prompts used with AI tools.
Prompt 1: Would you give the idea to brainstorm for the search & filter wireframe page design? I would like to include a search bar, filter, and results area
Prompt 2: Help with checking my survey design questions to match and follow the wireframe page Home / Dashboard, Series / Movie Page, Character Page / Character Details, Reflection History / Emotional Log, Search & Filter, Community Insights / Emotional Analytics, Notifications / Alerts, and Settings / Preferences requirements?

4. Actual Work Completed

Record all work completed toward follow, table 3: actual work, and table 4:*StoryEcho* Prototype Evaluation Survey

Table 3: Actual work

Actual Work Completed	Work Detail
Design Frame screenshot : 	This page filters the Anime, TV shows, and Movies, so this part builds 2 big frames: one for filtering, and another one to display the Anime, TV shows, and movies to simply describe the category. Then, on the bottom of the building, the home, message, and notification.

Table 4: *StoryEcho* Prototype Evaluation Survey

Survey Section	Content
Section 1 — Prototype Tasks	Task 1 — Home Navigation Explore the Home page and identify where you would start searching for a series.
	Task 2 — Search a Series 1. Click the search bar. 2. Imagine typing a series of character names. 3. Select one of the suggested results shown.
	Task 3 — View Series Page Open a series page and explore the overview and characters.
	Task 4 — Character Exploration Open a character profile and review relationships.
	Task 5 — Add a Reflection 1. Navigate to the reflection section. 2. Click the "Add Reflection" button. 3. Imagine writing your thoughts and selecting emotional tags.
	Task 6 — Reflection History Navigate to the reflection history page and explore filters.
	Task 7 — Community Insights View emotional analytics and interpret what users feel.
Section 2 — Overall Experience	The interface was easy to understand. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree
	I could quickly learn how to navigate the prototype. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree
	The layout of information felt clear and organized. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree

Survey Section	Content
	It was easy to understand where to click next. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree
	The navigation between pages felt smooth. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree
	The reflection feature was easy to locate and understand. ☐ 1 = Strongly Disagree ☐ 2 = Disagree ☐ 3 = Neutral ☐ 4 = Agree ☐ 5 = Strongly Agree
Section 3 — Flow-Based Evaluation	Home / Dashboard (Flow 1) The homepage clearly shows useful information. Quick actions were easy to understand. Open-ended: What worked well on the Home page?
	Series Page (Flow 2) The spoiler-free overview was helpful. Tabs/sections were easy to switch between. Open-ended: What improvements would you suggest?
	Character Page (Flow 3) Character relationships were easy to understand. Emotional information helped me understand the story better. Open-ended: Was anything confusing on this page?
Section 4 — Feature Evaluation	Which features did you find MOST useful? ☐ Spoiler-free summaries ☐ Character relationship tracking ☐ Emotional reflections ☐ Search & filter ☐ Community insights ☐ Reflection history

Survey Section	Content
Section 5 — UX Feedback	What confused you during use?
	What feature felt unnecessary or unclear?
Section 6 — Future Use	Would you use StoryEcho if it were a real application? ☐ Yes ☐ Maybe ☐ No Why?

5. Appendix

The following format presents the product backlog based on team discussions and task allocation among group members.

Table 5: Team Product Backlog and Task Allocation

Person	Task	Key Requirements
Sin-Yi	Logo design	App logo
Derrick	Flow 1: Home / Dashboard	Card-style content list Quick action buttons: Add Reflection / View Character Relationships / View Story Overview
Jude	Flow 2: Series / Movie Page	Tabs or accordion sections: Overview / Characters / Reflection / Community Mood selector / emotional tags Lightweight text input + save button Scrollable community reflection list
Derrick	Flow 3: Character Page / Character Details	Node graph/network diagram for relationships Timeline of character emotional development Simple buttons to add or edit emotional tags
Derrick	Flow 4: Reflection History / Emotional Log	Card or list-style reflection entries Filter dropdowns Color-coded emotion tags
Sin-Yi	Flow 5: Search & Filter	Search bar with autocomplete Filter checkboxes/buttons Results displayed in card layout
Jude	Flow 6: Community Insights / Emotional Analytics	Pie chart/bar, chart/line chart for emotions Clickable summary of anonymous reflections
Derrick	Flow 7: Notifications / Alerts	Floating corner notification Badge indicator for updates
Jude	Flow 8: Settings / Preferences	Toggle switches, dropdown menus Save / Reset buttons
Sin-Yi	Survey Design	Design structured survey questions
Sin-Yi	Data Collection plan	data collected, quantitative & qualitative analysis
